

FREE PUBLIC TOOL / OCTOBER 2026

The Agentic AI Career Playbook

A free playbook for anyone who can communicate. No signup, nothing to buy, and it runs in the browser.

Arup Banerjee • October 2026

Unlearn, relearn, stay relevant.

Personal project built on my own time. Not affiliated with or endorsed by my employer; views are my own.

Delegation is the skill, and many people already have it

01

Back to work

People returning to work, including homemakers, and career changers. Running a home already means briefing and checking work.

02

Outside software

Nurses, teachers, and shop owners already hand off tasks, say what done looks like, and check the result.

03

Developers

Including 30-year Java veterans. Their unlearning: hands off the keyboard, and drop the "I'll just do it myself" reflex.

Brief it, check it, own it

01 BRIEF IT

The five-line Brief Card

- 1 Intent**
what you want
- 2 Context**
what the agent needs to know
- 3 Constraints**
what it must not do
- 4 Done when**
how you'll check that it worked
- 5 Examples**
what good looks like

02 CHECK IT

BEFORE THE WORK

"Tell me what you think is wrong and what you plan to change."

agent does the work

AFTER THE WORK

"List every change you made, and why."

03 OWN IT

Explain-It-Back

In two sentences, without looking: what was wrong, what changed, and how you know it's fixed.

Ownership Log

One line per delegation: date, what I asked for, what changed and why, how I checked, would I undo it?

Delegate the typing, not the responsibility.

Module 1 in one journey

- 01 **Pick a bug card** one of four fictional cards: spreadsheet, flyer, web page, or Java.
- 02 **Delegate with zero hands** get an AI assistant to fix it without typing in the card yourself.
- 03 **Check it** two checkpoints, then explain the fix back in two sentences.
- 04 **Score yourself** Hands count, Owner Score out of 10, and a rank: Golden Hands to Old Habits.
- 05 **Leave with proof** a Brief Card and an Ownership Log, saved in your browser to copy or download.

Clear communication changes outcomes

20/100

Vague brief for a fictional bike-shop bot: "Not safe for customer traffic"

66/100

The same bot with a five-line brief

5 lines

Intent, Context, Constraints, Done when, Examples

Scores from the free Agent Health Checker, a heuristic check. Author's run on Oct 1, 2026.

Static pages, one script, the learner's browser

GitHub Pages serves HTML, CSS, and

localStorage holds progress (abl_playbook_m1)

mailto: is the whole volunteer signup

We never see the learner's work

01

Stays on device

Typed work, scores, and logs live in one localStorage key. "Clear my data" erases it.

02

Labels only

Anonymous counts use fixed labels only. Never sent: typed words, score, rank, names, or email.

03

No-script pages

The Terms and Privacy pages load no scripts (script-src 'none') and are not counted.

Module 1 scales for free; three limits remain

- Progress is per device: no sync, and a private window or cleared browser data loses it.
- Volunteer intake is one inbox, with every tester email handled by hand.
- Volunteer and navigation clicks may be undercounted in Chromium browsers.

CAPACITY

About 850,000 Module 1 loads a month fit under GitHub Pages' 100 GB soft cap, with no per-user compute or storage cost.

Next: three steps on the roadmap, and testers to help

Milestone	Target	What it adds
Modules 2–4	Oct 17, 2026 (target)	See the Tool, the Hands-Off Challenge, Stay the Owner
Modules 5–7	Target, no date set	No-code and developer paths (Java & Spring Boot)
Module 8	Target, no date set	Agent Proof Check: self-scored, with a public rubric
The ask	Now	Volunteer testers, coders and non-coders, by email

All dates are the author's targets, not commitments. Volunteer via the `mailto:` link on the `playbook` page.
